

INTRODUCTION- I want to describe a special paradox through your esteemed journal. This paradox provides us various mathematical concepts, axioms and laws of science. This is the only paradox which is the father of all paradoxes present in nature.

This paradox may change our understandings about the universes that is the universe is a simulation or reality.

Explanation- This paradox is defined by a simple sentence " **Everything is perfect.**"

Or

**"Everything is perfect.**

**Everything is a paradox."**

When we say that everything is perfect in nature that means none of the paradoxes exist in nature.

But the number paradoxes exist in nature.so,

When we assume that everything is not perfect. It means that everything in nature is a paradox.

Therefore, every law of maths and science has dual meaning. It is like that our universe and parallel universe.like substance exists in two types matter or anti-matter.

When we say that **everything is a paradox** that means nothing is perfect in nature which contradicts our above statement.

Hence, the statement "**Everything is perfect.**" is a paradox.

Also, the statement "**Everything is perfect. Everything is a paradox.**" is the advanced version of the above statement.

But paradoxes exist in nature which means that everything is not perfect this implies that everything is a paradox.

This paradox is the universal set of all paradoxes in nature.

#### **Conclusion-**

1. The whole universe is a paradox.
2. The laws of mathematics and physics are true regardless of this paradox.
3. Every natural phenomenon have dual meaning.
4. For example,

We know that  $2+2=4$

But, we are not able to prove  $2+2\neq 5$

Therefore,  $2+2=5$  (may be true)

$$2+2=6$$

$$2+2=9$$
